Inventory PWA — screen catalogue

Screens built so far (Features 1–3), captured on each device size. Intended as the baseline for the UI/UX enhancement pass.

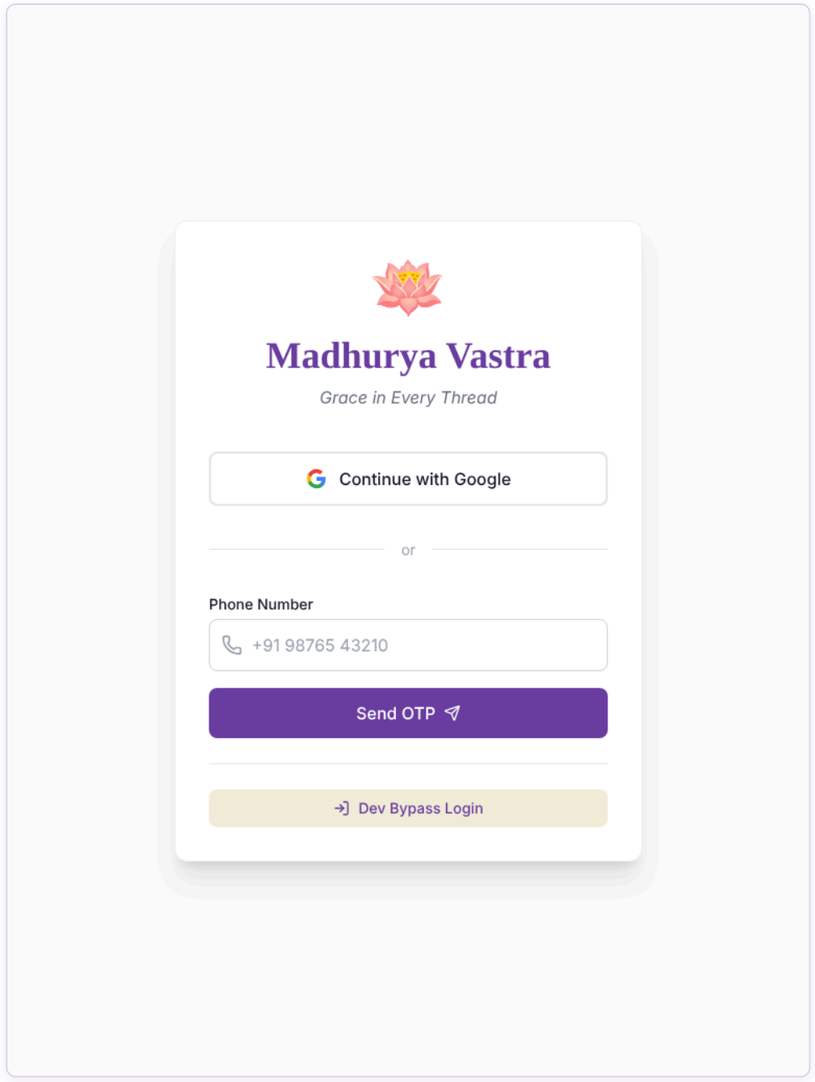

1. Login
2. Inventory (placeholder)
3. Add Item — empty, filled, validation
4. Manage Lists — Types, Colors, Occasions, Tags
5. Sales (placeholder)
6. Dashboard (placeholder)
7. UI/UX observations

Device sizes: phone 390×844 and 844×390, tablet 768×1024, laptop 1366×768. Captured from the dev build with the dev-login bypass.

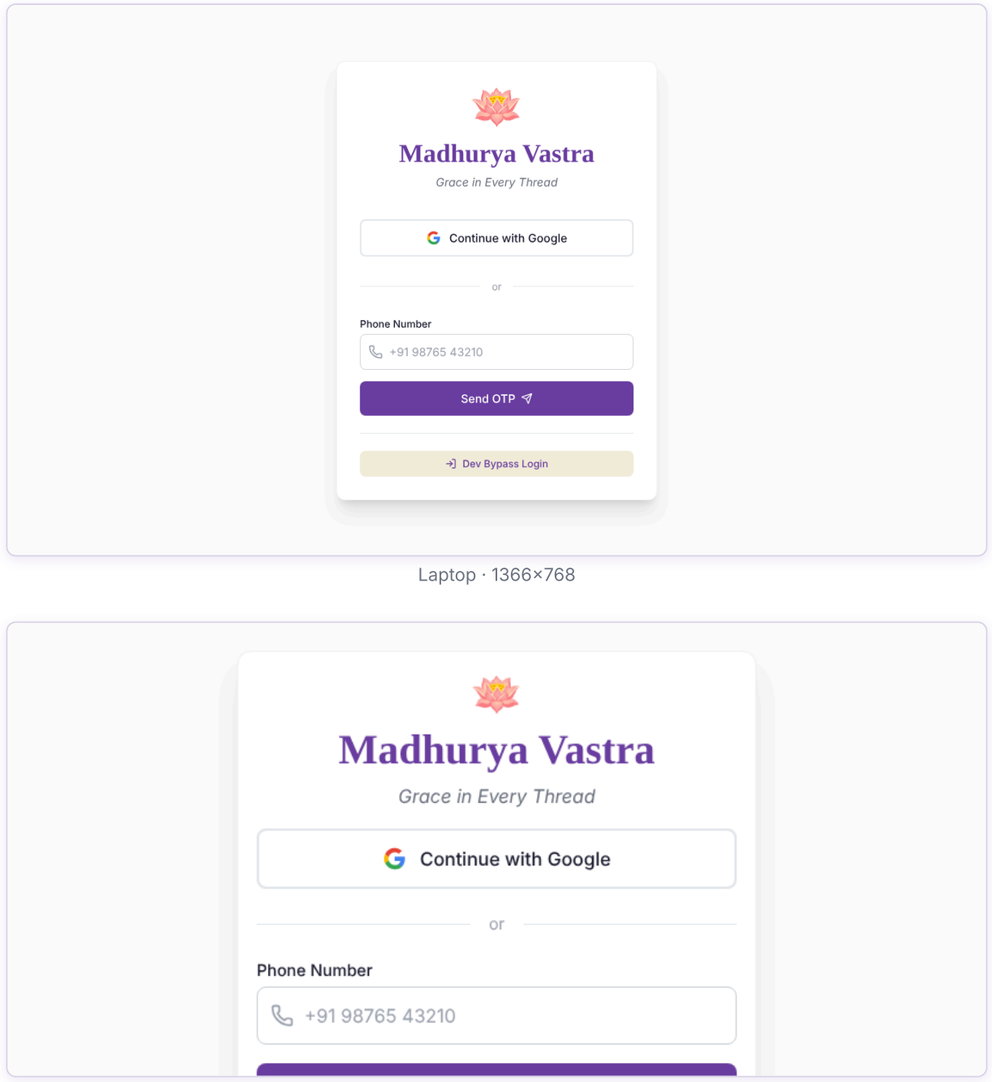

Login /login — shown before sign-in

Phone portrait · 390×844

Tablet portrait · 768×1024

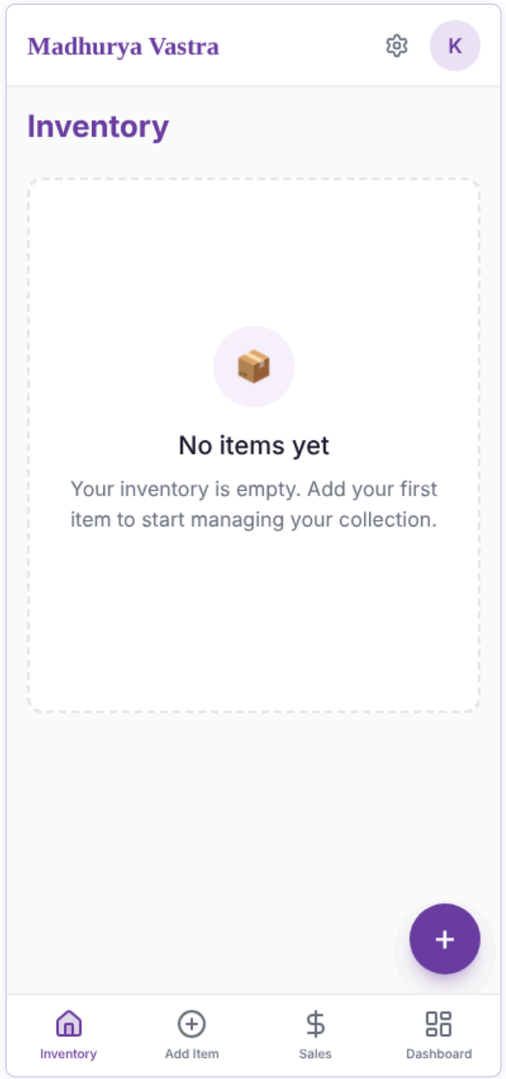

Laptop · 1366×768

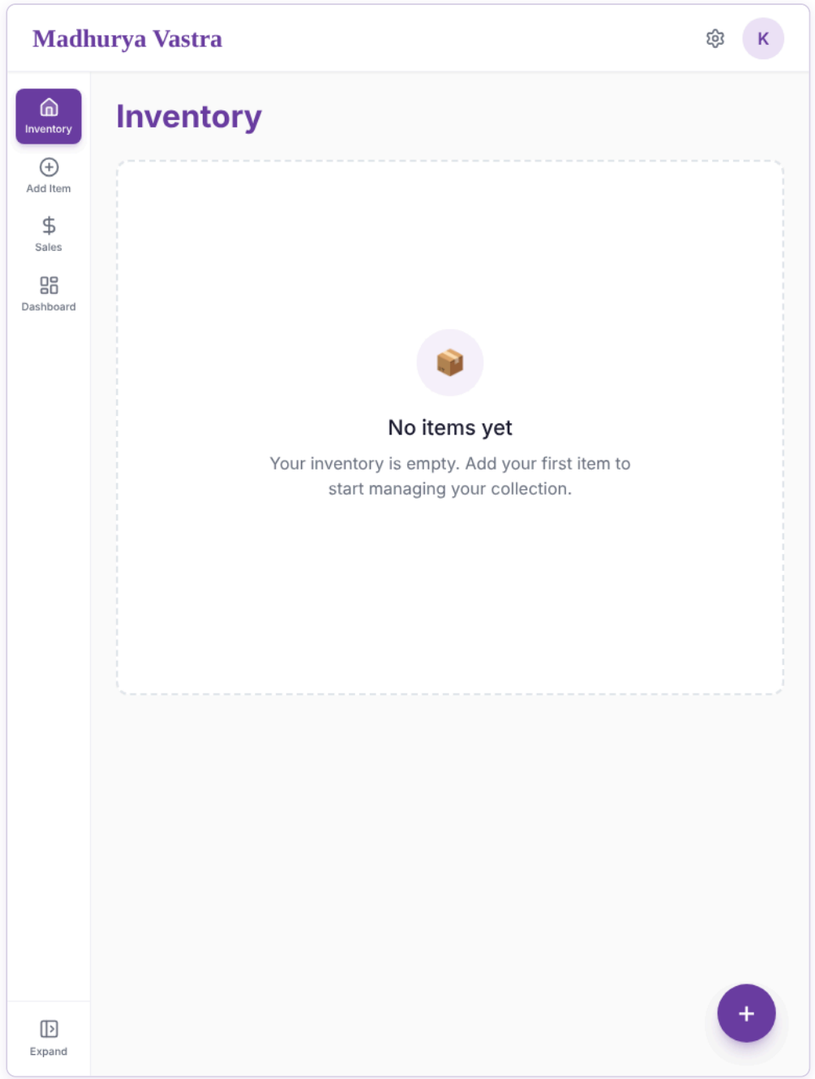

Phone landscape · 844×390

Google and phone-OTP buttons are visual only; the “Dev Login” bypass is what actually signs in.

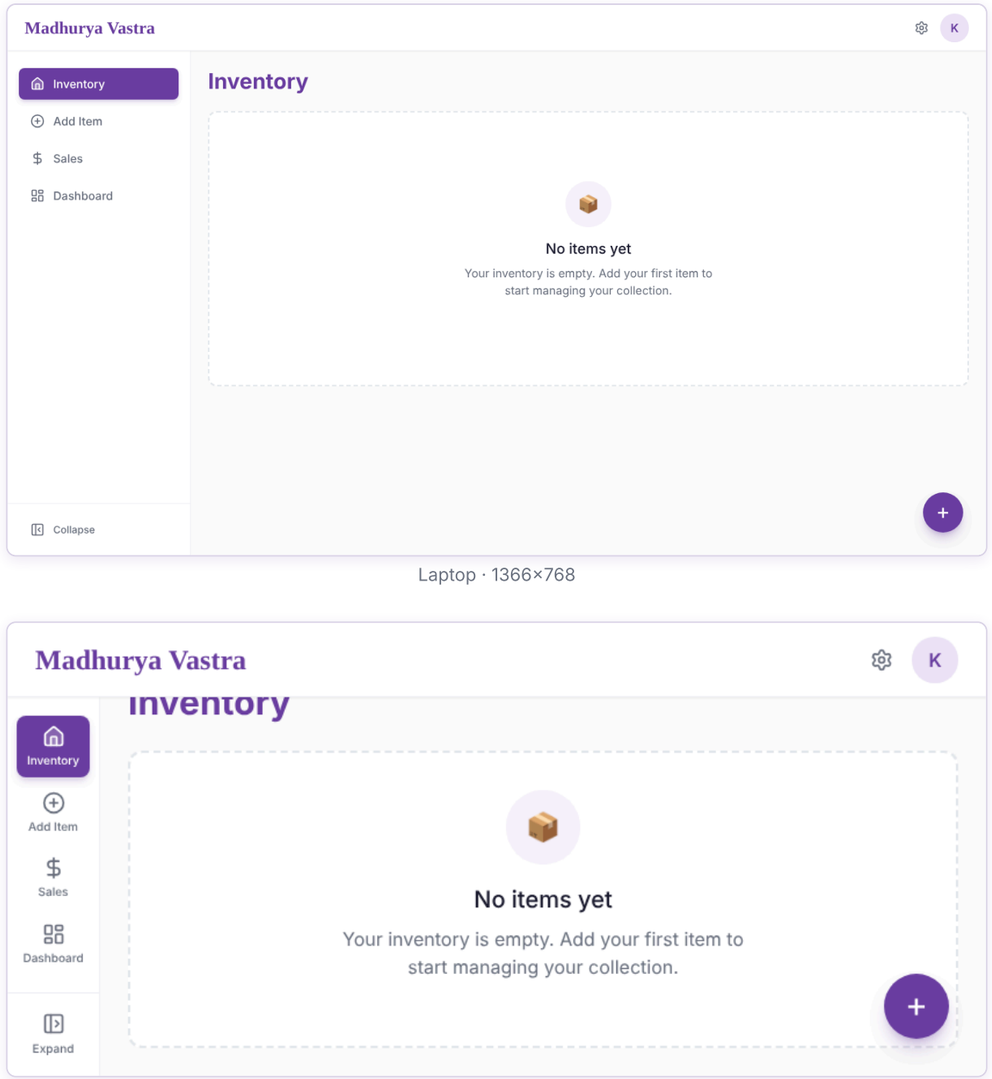

Inventory /inventory

UI/UX observations (baseline for the enhancement pass)

Navigation & shell

- Page titles are repeated in-page and not tied to the header; no breadcrumbs or back affordance except on Manage Lists.
- Manage Lists is reachable only via the small gear icon in the header — easy to miss; it is not in the sidebar or bottom nav.
- User menu closes only by re-clicking the avatar (no outside-click or Esc close).
- Collapsed sidebar relies on 10px labels; consider tooltips-only or larger icons.

Visual consistency

- Mixed corner radii (rounded-[12px], rounded-card, rounded-input, rounded-lg) and ad-hoc spacing — worth consolidating into tokens.
- Serif brand font appears only on the header and Manage Lists title; other page titles are bold sans.
- Empty states differ in style (dashed card on Inventory, plain card on Sales/Dashboard).

Add Item

- Long single page: a section nav or progress indicator, and collapsible sections, would help on phones.
- Variant grid shows a 0 in every cell by default; consider a “fill all” and per-row/column quick-fill.
- Image thumbnails have no tap-to-preview, no alt-text field, and no upload progress for large files.
- Inline errors clear on edit but there is no top-level summary after a failed submit.
- Draft vs active choice lives only in the two bottom buttons; no indication of what “draft” means.

Not yet built

- Inventory list/grid, item detail/edit, Sales, Dashboard, real authentication, and loading/skeleton states beyond Manage Lists.
- Dark mode: only a CSS variable pair exists; most components are hard-coded light.
